

WINBERRY FARMS FAQ – Vape quality
September 2019

WINBERRY FARMS PRODUCT UPDATE

DYME Brands and its brand Winberry Farms are closely following the recent news surrounding vape products and their impact on the health of vape consumers.

Winberry Farms products do not contain any vitamin E acetate, nor do we use cutting agents such as PV, VG or MCT. All of our products meet both internal and external rigorous compliance standards and go through extensive third-party testing for contaminants. Winberry Farms vendor partners for cartridges and batteries are carefully vetted and adhere to the highest quality manufacturing standards.

DYME and Winberry Farms continue to strongly recommend that consumers buy only legal, regulated products in legal, regulated environments in accordance with the CDC, FDA, ODA, OLCC and HHS, which have advised consumers to avoid buying cannabis vapes or using products off the street or in illicit dispensaries.

Below is information about our Winberry Farms products. Please contact us at info@DYME.com with any additional questions.

1. Do any Winberry Farms products contain the ingredient vitamin E acetate?
 - Our suppliers have provided written confirmation that ingredients used in Winberry Farms products do not contain vitamin E acetate.
2. Do any Winberry Farms products contain ingredients other than cannabis?
 - DYME's Fresh-squeezed and Cold Press products contain 100% cannabis ingredients.
 - All CBD vape products and flavored vapes include additional ingredients and are enhanced with natural terpenes and flavor compounds plus phytol.
 - Winberry Farms CBD products contain Hemp extracts.
3. What other ingredients are included?
 - Phytol, or "Nexus" is used as a dilutant in some of our products. It is a constituent of chlorophyll and is a diterpene alcohol. It is not Vitamin E acetate.
4. What solvent do you use to extract your cannabis oil?
 - Our manufacturing partners use isobutane, CO2 and ethanol.

5. What are the ingredients you use to clean your cannabis filling machine and or other equipment?
 - We follow the industry standard and use isopropyl alcohol.
6. Do you use vitamin E acetate in any part of your manufacturing process?
 - Winberry Farms does not use vitamin E acetate in any part of our manufacturing process.
7. Do you have a Certificate of Conformity for Winberry Farms cartridges?
 - Every product lot is tested according to individual state regulatory and legal requirements.
8. What due diligence steps does Winberry Farms take to ensure safety in its products?
 - Winberry Farms ensures all terpene blends and ingredients are confirmed with corresponding GRAS statements.
