

# NW KIND

NW KIND is most concerned, and takes very seriously, the recent phenomena of vape related health issues. It is important that our dispensary partners, and our customer base, know that the quality and safety of the products we produce is paramount to us. NW KIND is committed to ensuring customers that our products adhere to the highest quality, safety and testing standards in the industry.

All of the NWK current offerings, including Distillate and Live Resin cartridges include:

- only 100% cannabis inputs
- 99% of our source material comes from organic farms including our own organic, no till indoor farm.
- We do not introduce any additives, thinners or thickeners such as MCT oil, Vegetable glycerin, Honey Cut, Propylene Glycol, or Vitamin E oil. Our goal has always been to provide an “as close to the plant” experience as possible.
- All NWK products are rigorously tested and verified to meet the stringent safety standards as mandated by the State of Oregon.
- The C-cell cartridges we use are heavy-metal tested and certified lead free.
- Additionally, NW KIND carries a robust product liability insurance policy, which carries a blanket additional insured certificate covering all our partner dispensaries.

Our hearts and prayers go out to those who have suffered from this new phenomena of vape-related illness. Please feel free to contact an owner, day or night with any questions or concerns regarding NW KIND products.
